VIBEZ

COMMUNITIES • EVENT • CULTURE

- **Project overview**

  platform that facilitates exclusive social communities and events. The app
  provides a unique experience where users can join private communities,
  subject to approval by the community owners, and then gain access to
  purchase event tickets and participate in community-specific events.
  The application aims to foster a sense of belonging, privacy, and
  exclusivity for its users.

- **Market research**

 eventbrite   festicket   xceed   ticketmaster

  Lack of Private Communities and Exclusive Event Management in Ticket
  Sales Applications.The existing event management and ticket sales
  applications cater primarily to the general public, lacking essential features
  required for managing private communities and exclusive events. The
  current applications do not offer the capability to create closed
  communities with controlled membership and restricted access to events.
  This leads to a significant gap in the market, as there is no platform that
  allows community owners to decide who can join their communities and
  participate in community-specific events.

- **The goal**

  VIBEZ Application addresses the need for a platform that enables the
  creation and management of private events within exclusive communities.
  Unlike existing ticket sales and event management applications, this app
  focuses on catering to private communities, where access to events is
  restricted to approved members only. The application aims to revolutionize
  the event management landscape by providing a secure and exclusive
  environment for organizing events within private communities.
