

The SAAS system stands out for its comprehensive approach to community management, seamlessly combining private community creation, exclusive event organization, meticulous financial oversight, effortless product management, and nuanced participant engagement. Its distinctive strength lies in the integration of these features into a unified platform, enabling community owners to curate exclusive experiences, make informed decisions, and foster thriving communities through a user-friendly and interconnected system.

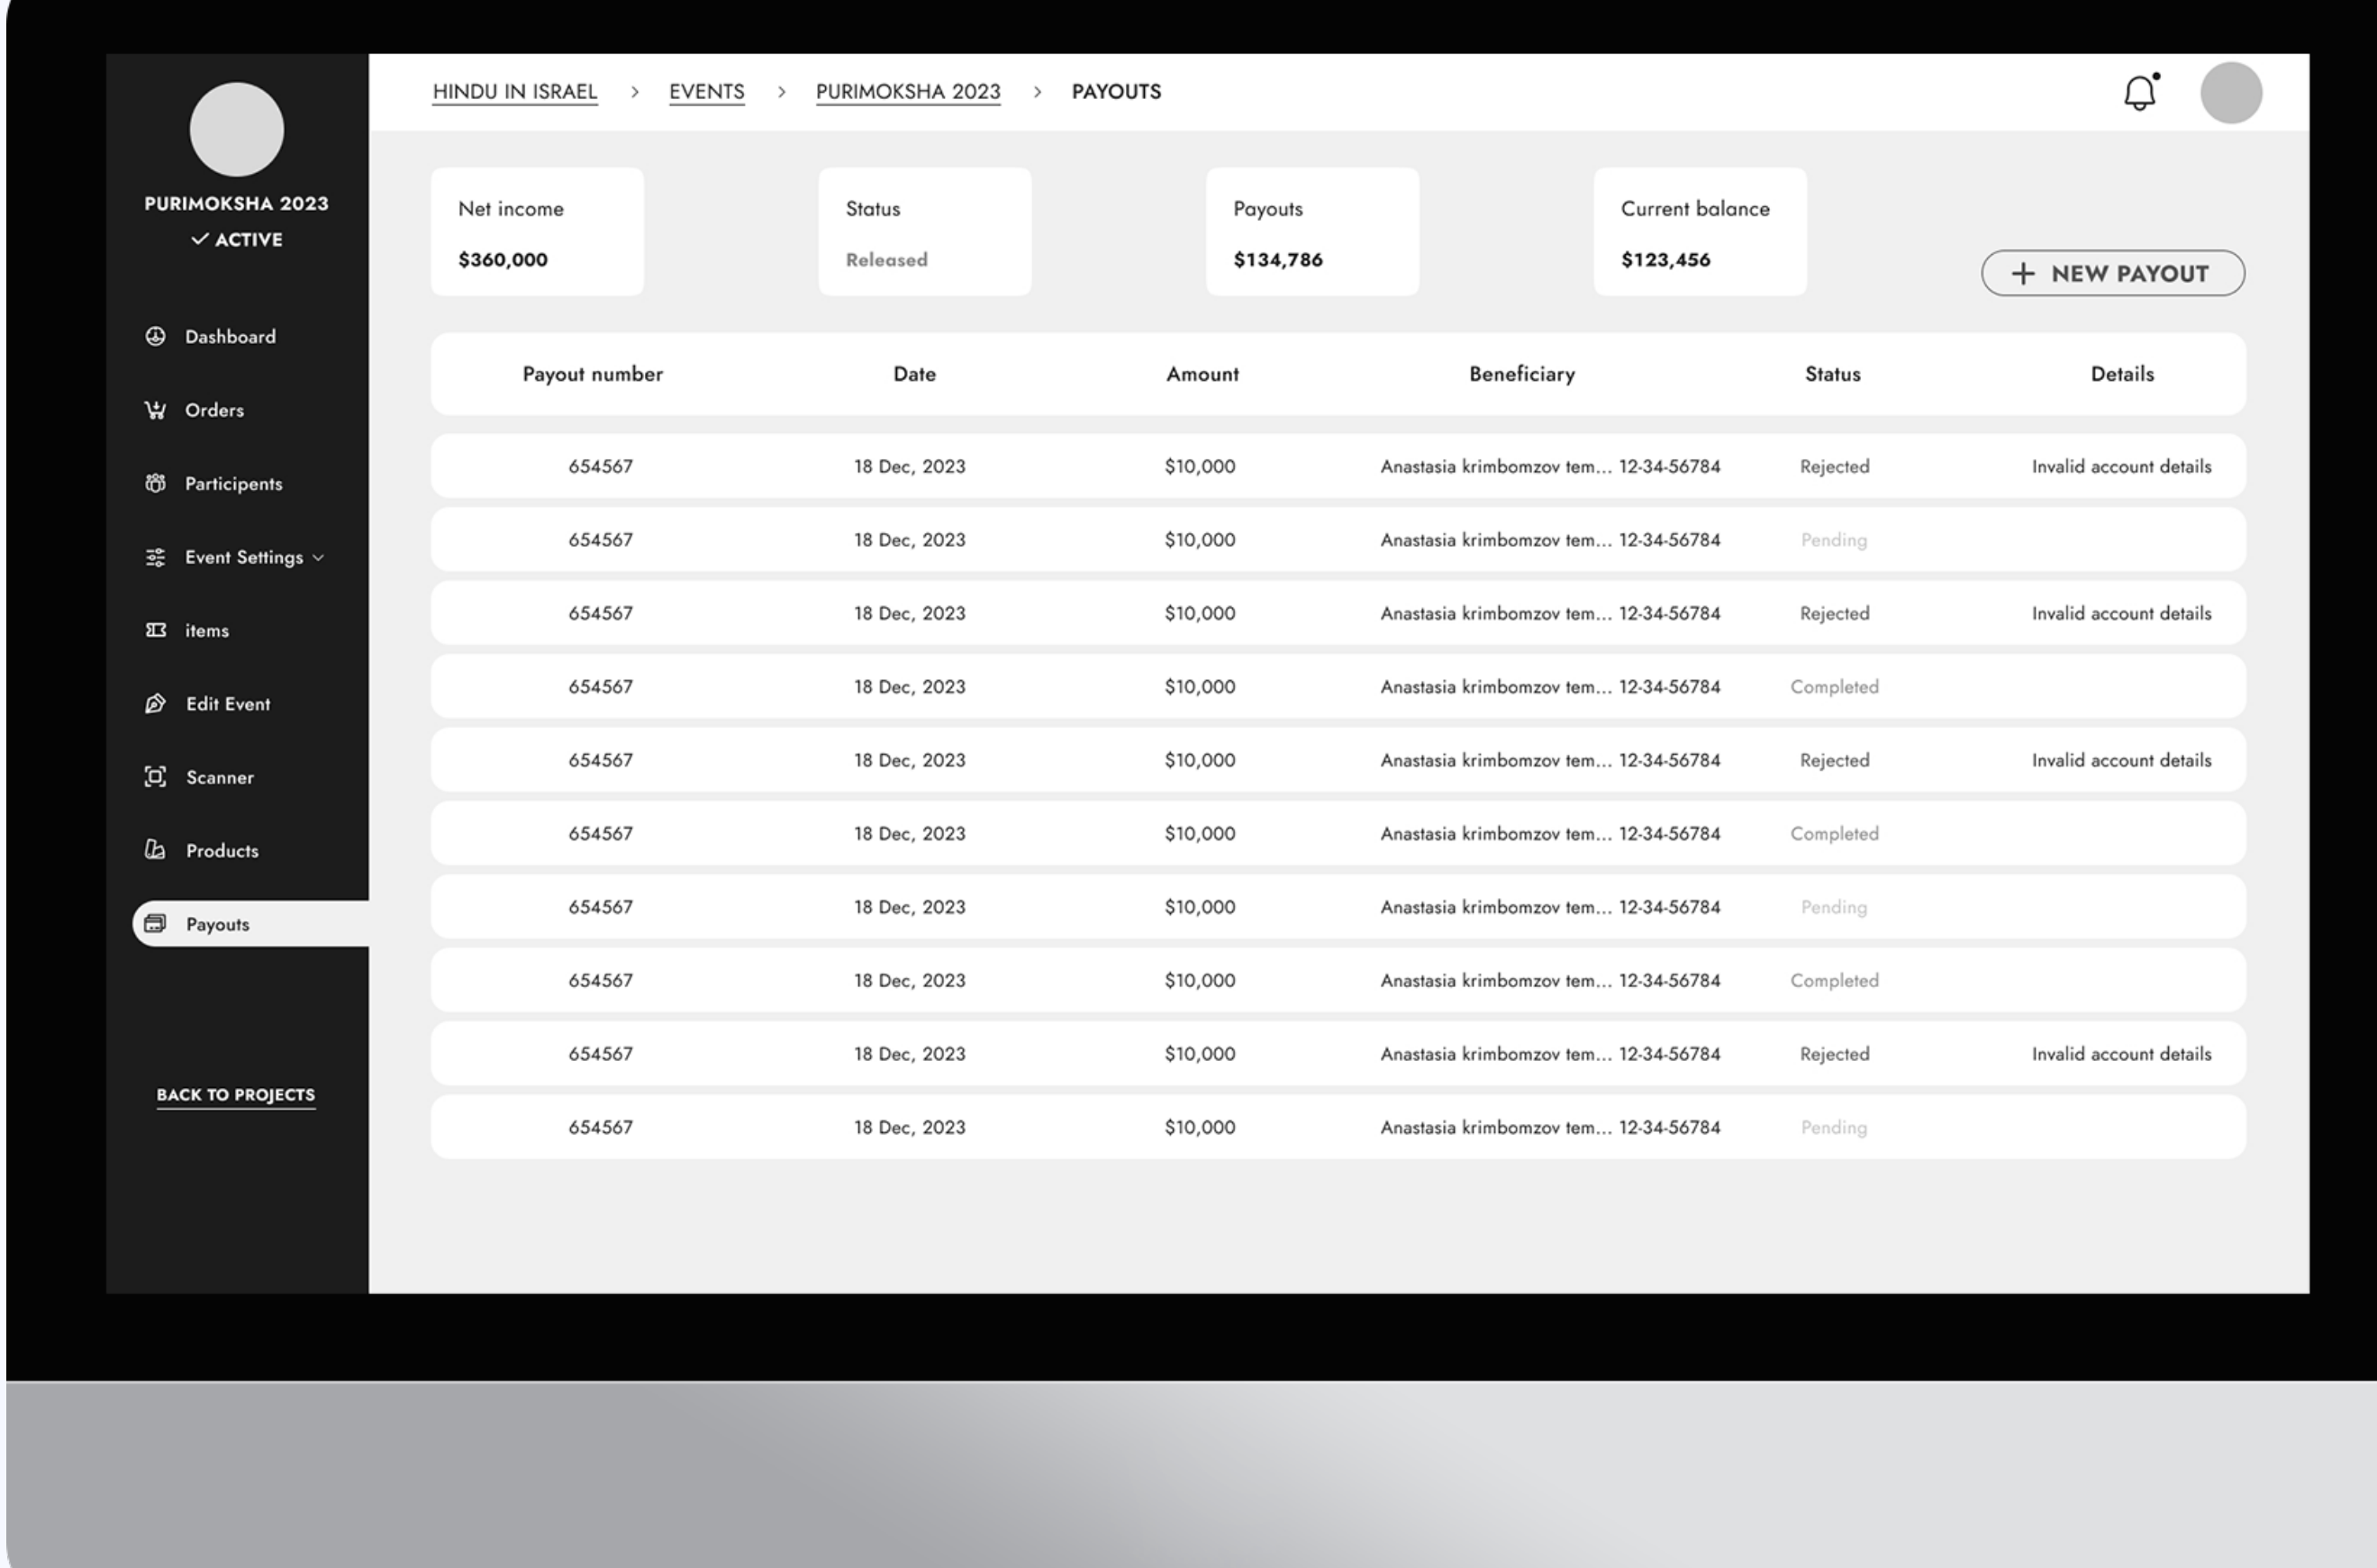

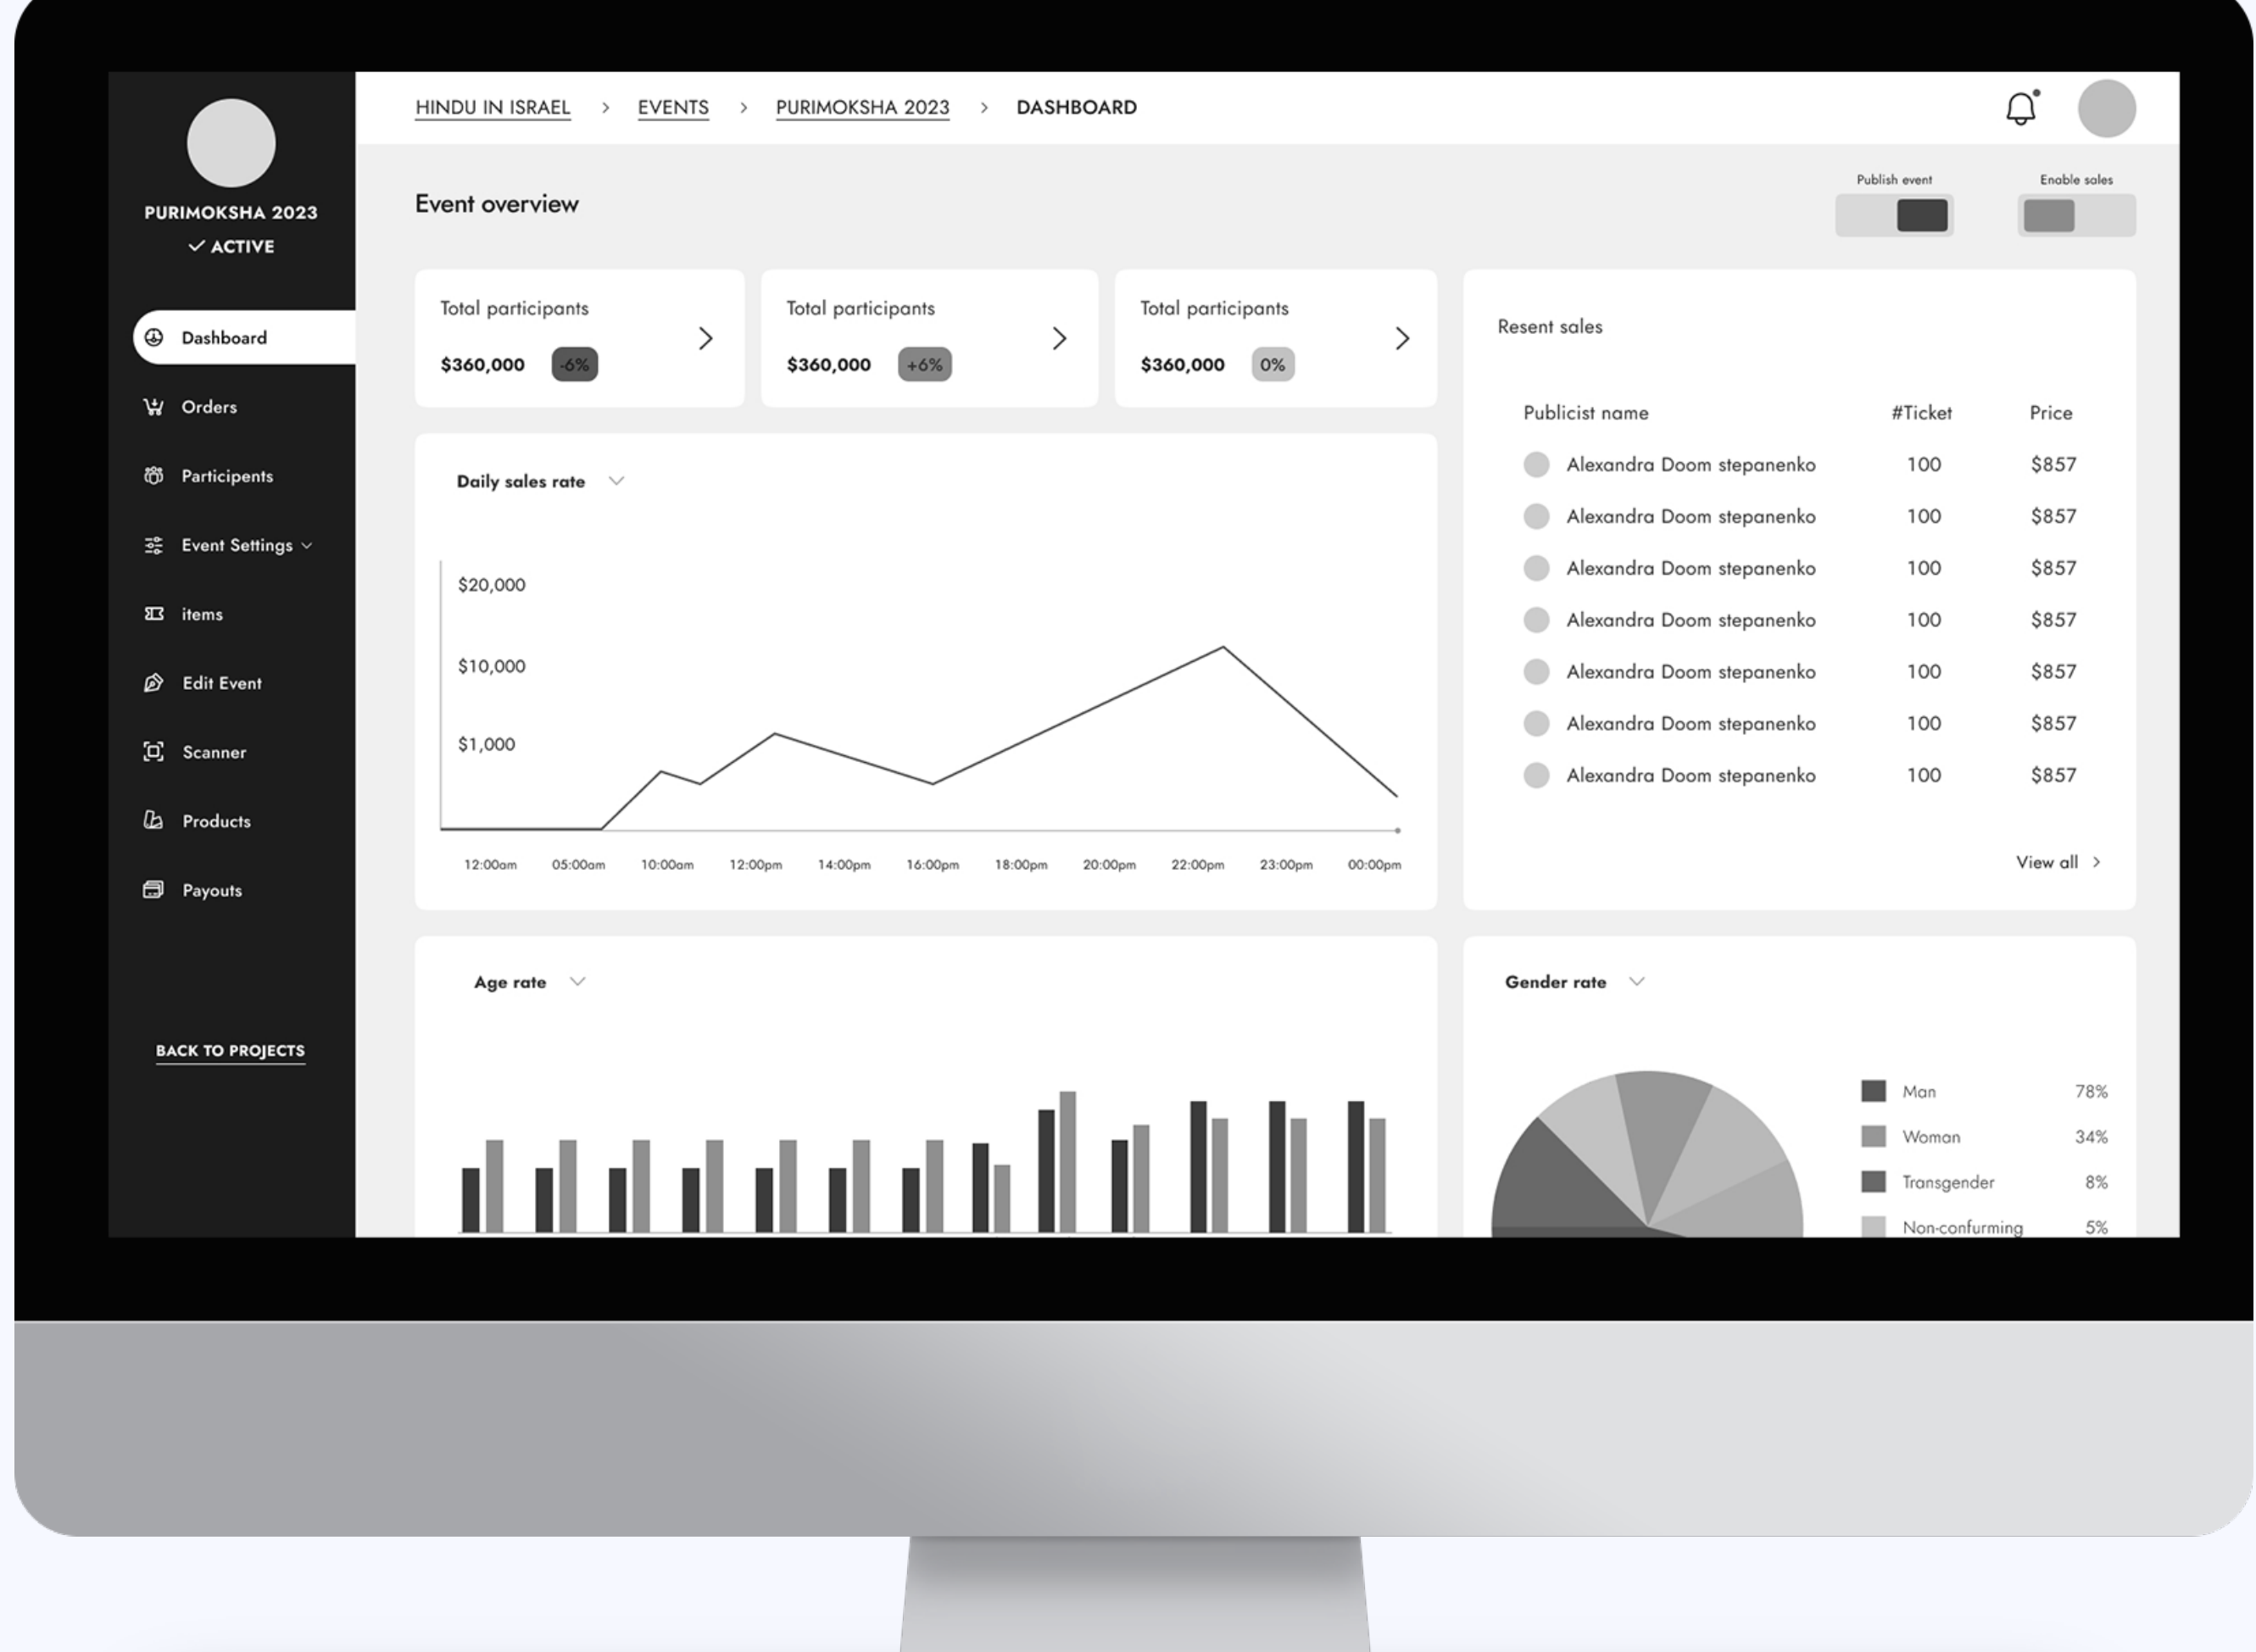

Project Screen

In this screen, the owner gains the ability to initiate new private communities effortlessly. The owner can customize community details, set its purpose and guidelines, and then invite specific members through email invitations or predefined lists. Moreover, the owner can plan and organize private events within the community. These events can have unique descriptions, dates, venues, and themes. For these events, the owner can generate tickets and limit their availability to approved individuals only, ensuring exclusivity and controlled access.

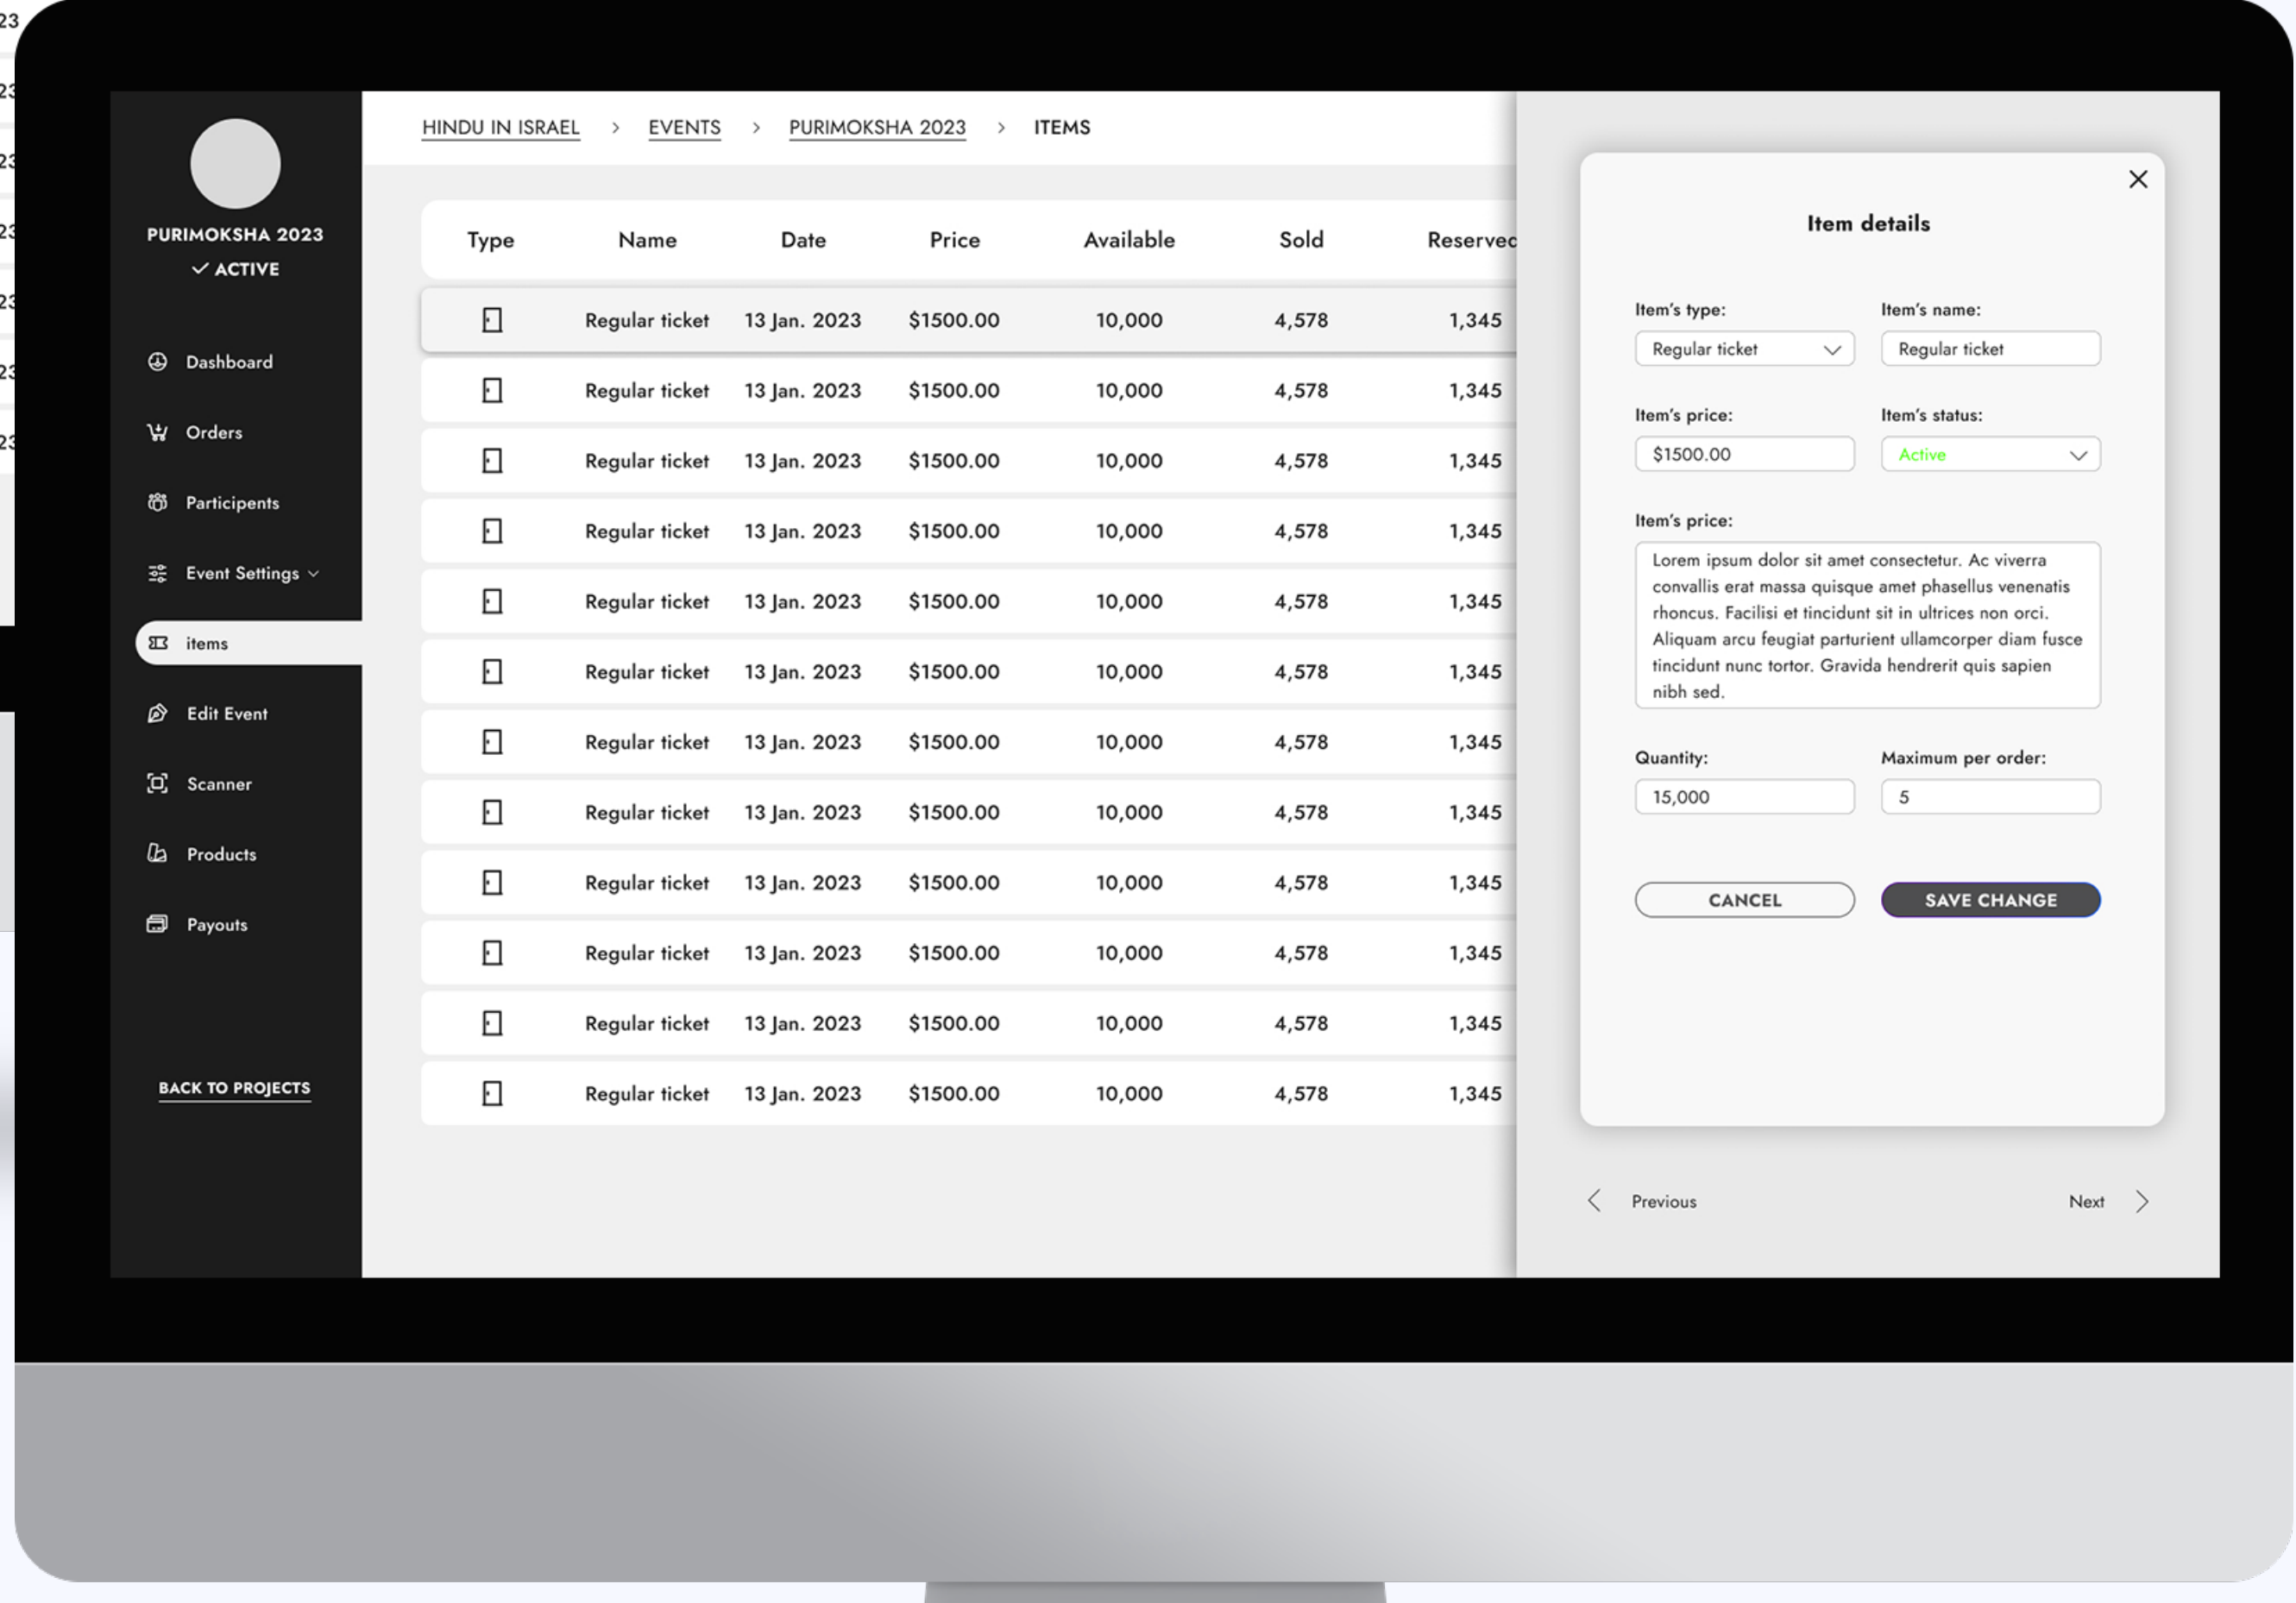

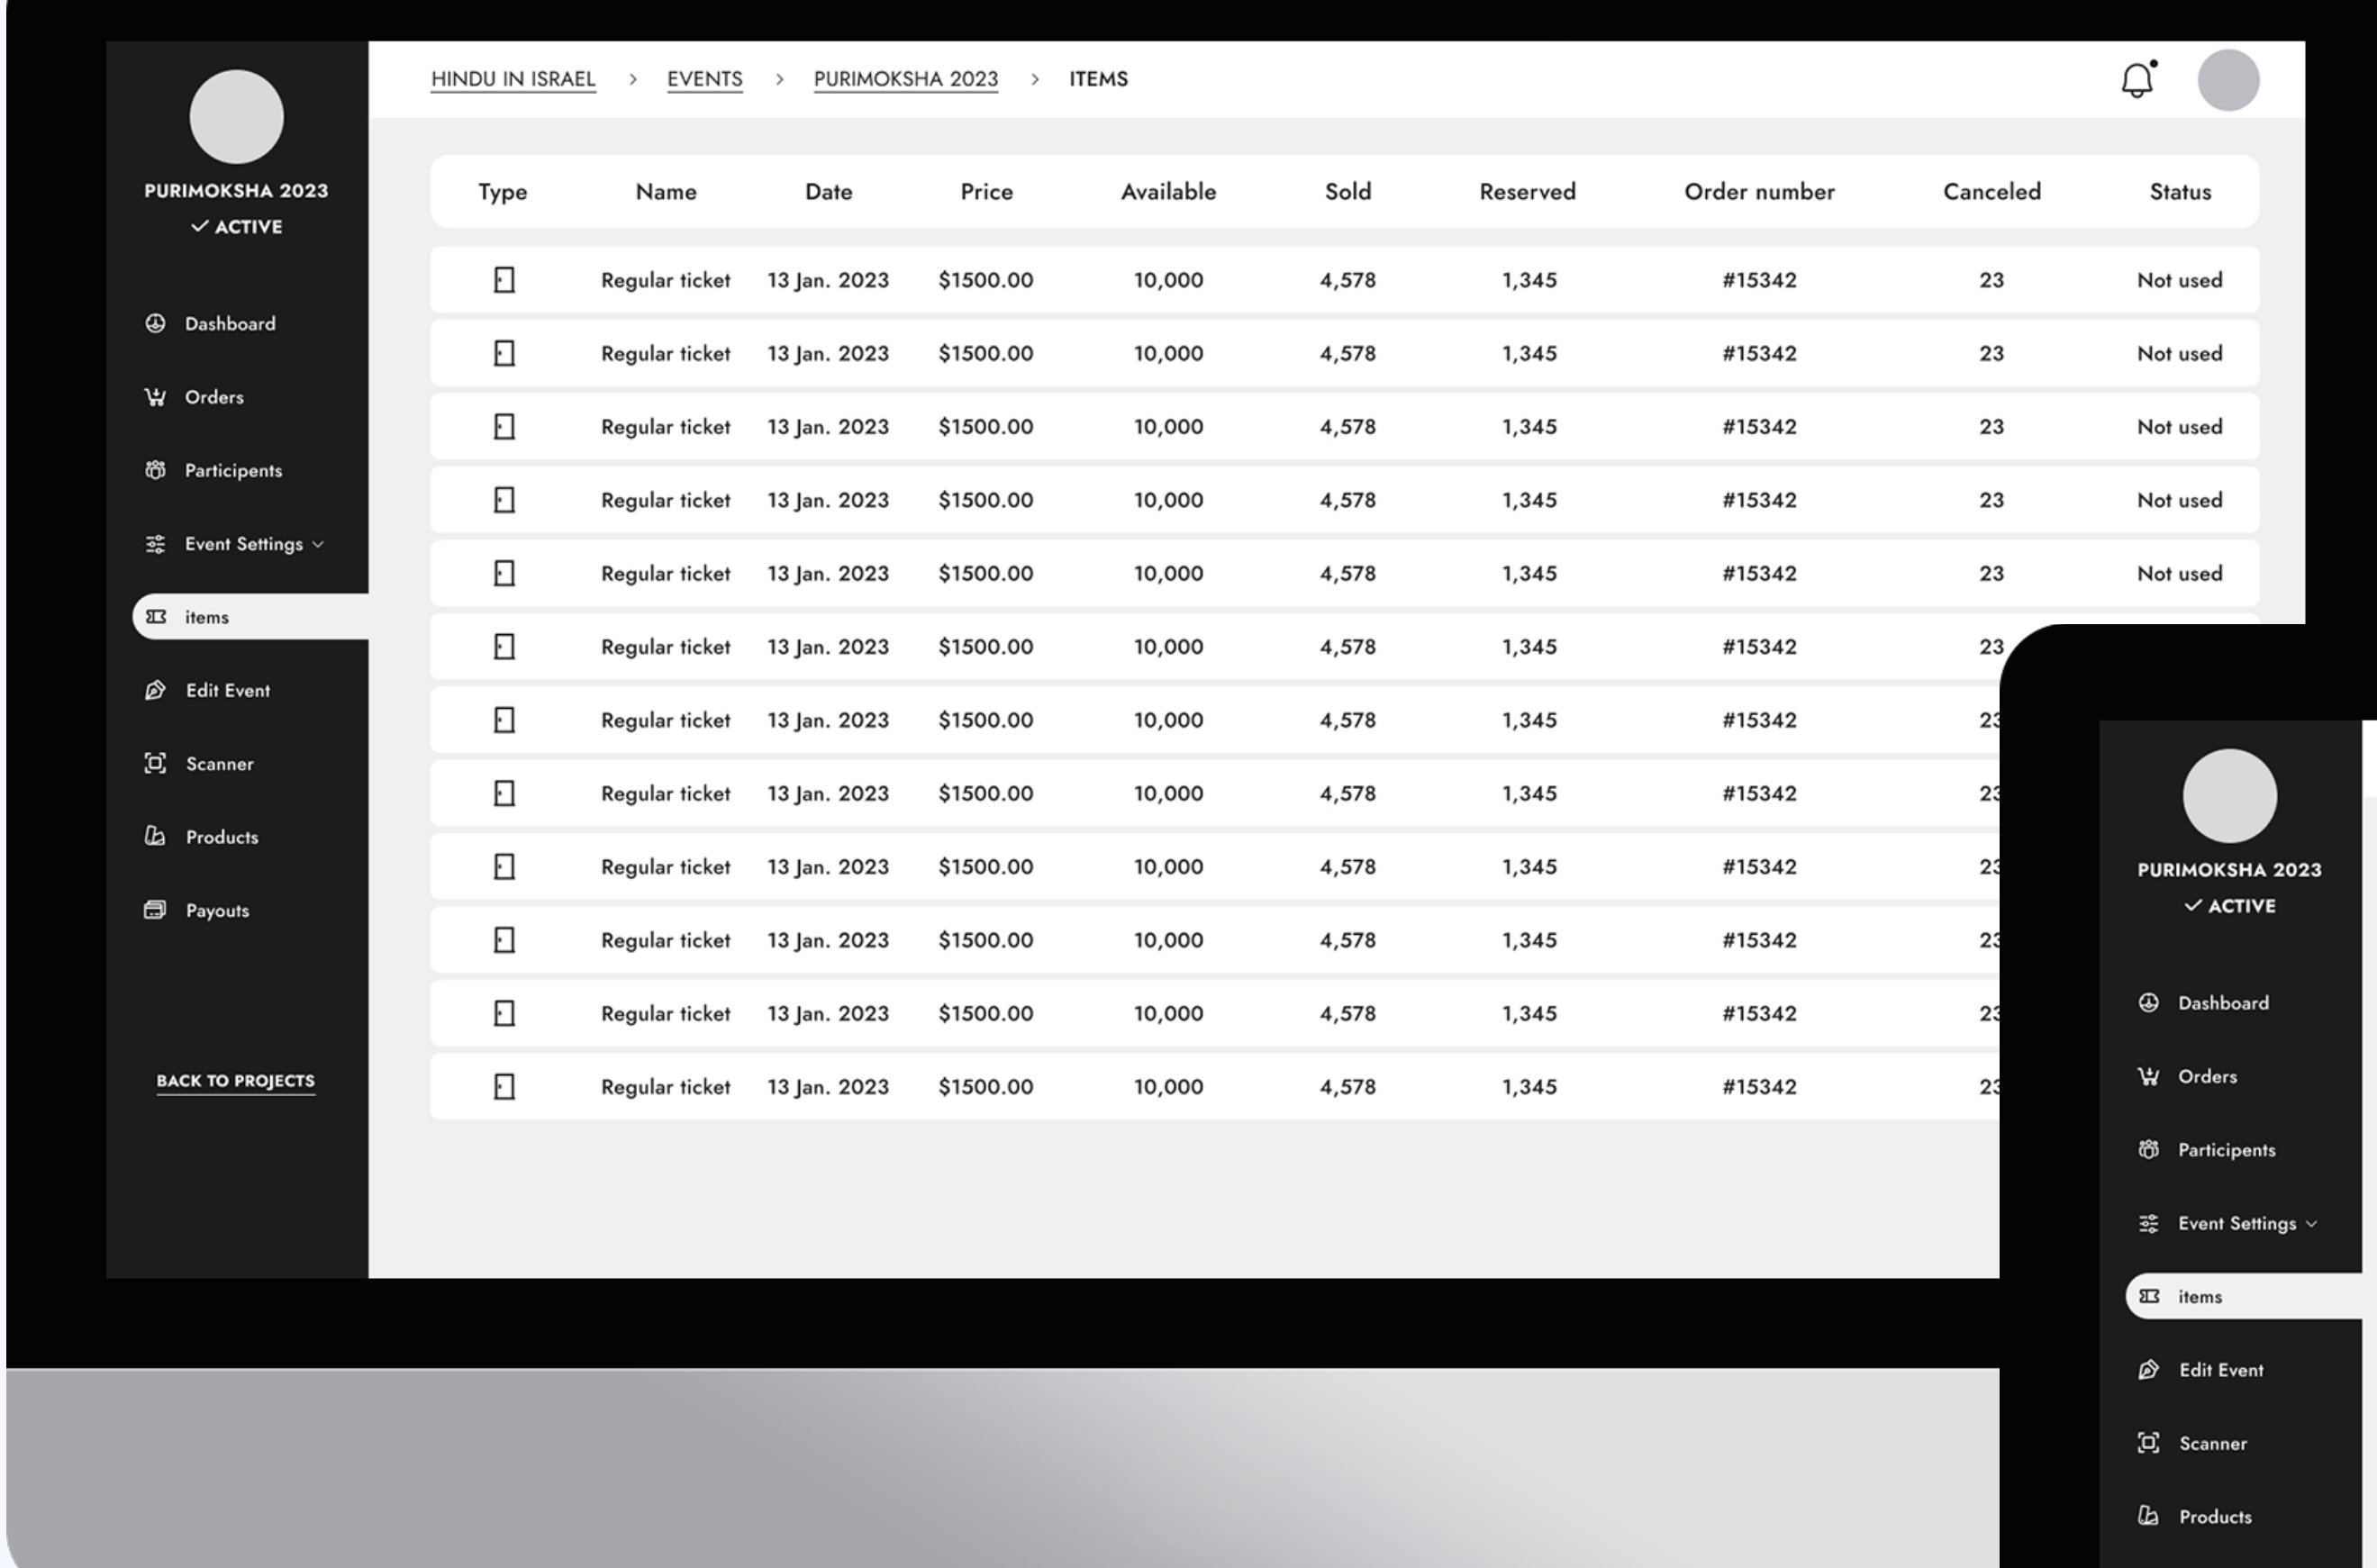

Event Dashboard

The Event Dashboard presents a comprehensive overview of all the owner's activities. This includes detailed analytics on items sold, tickets purchased, member interactions, and sales performance. The owner can assess the overall success of events through various metrics such as total sales, sales rates, and member engagement. The dashboard enables the owner to make informed decisions by providing insights into event popularity, enabling timely adjustments and enhancements. Additionally, the dashboard acts as a hub for managing ongoing events, allowing the owner to make real-time updates, monitor sales trends, and communicate with members.

Payouts Screen

The Payouts Screen offers financial transparency to the owner. It displays all payouts generated from event sales and item transactions. The owner can easily track income and expenses, accessing detailed breakdowns of each payout. This screen also enabled the owner to initiate new payouts directly within the system. By inputting necessary details, such as payment method and amount, the owner can streamline financial distributions to partners, vendors, or contributors involved in the events.

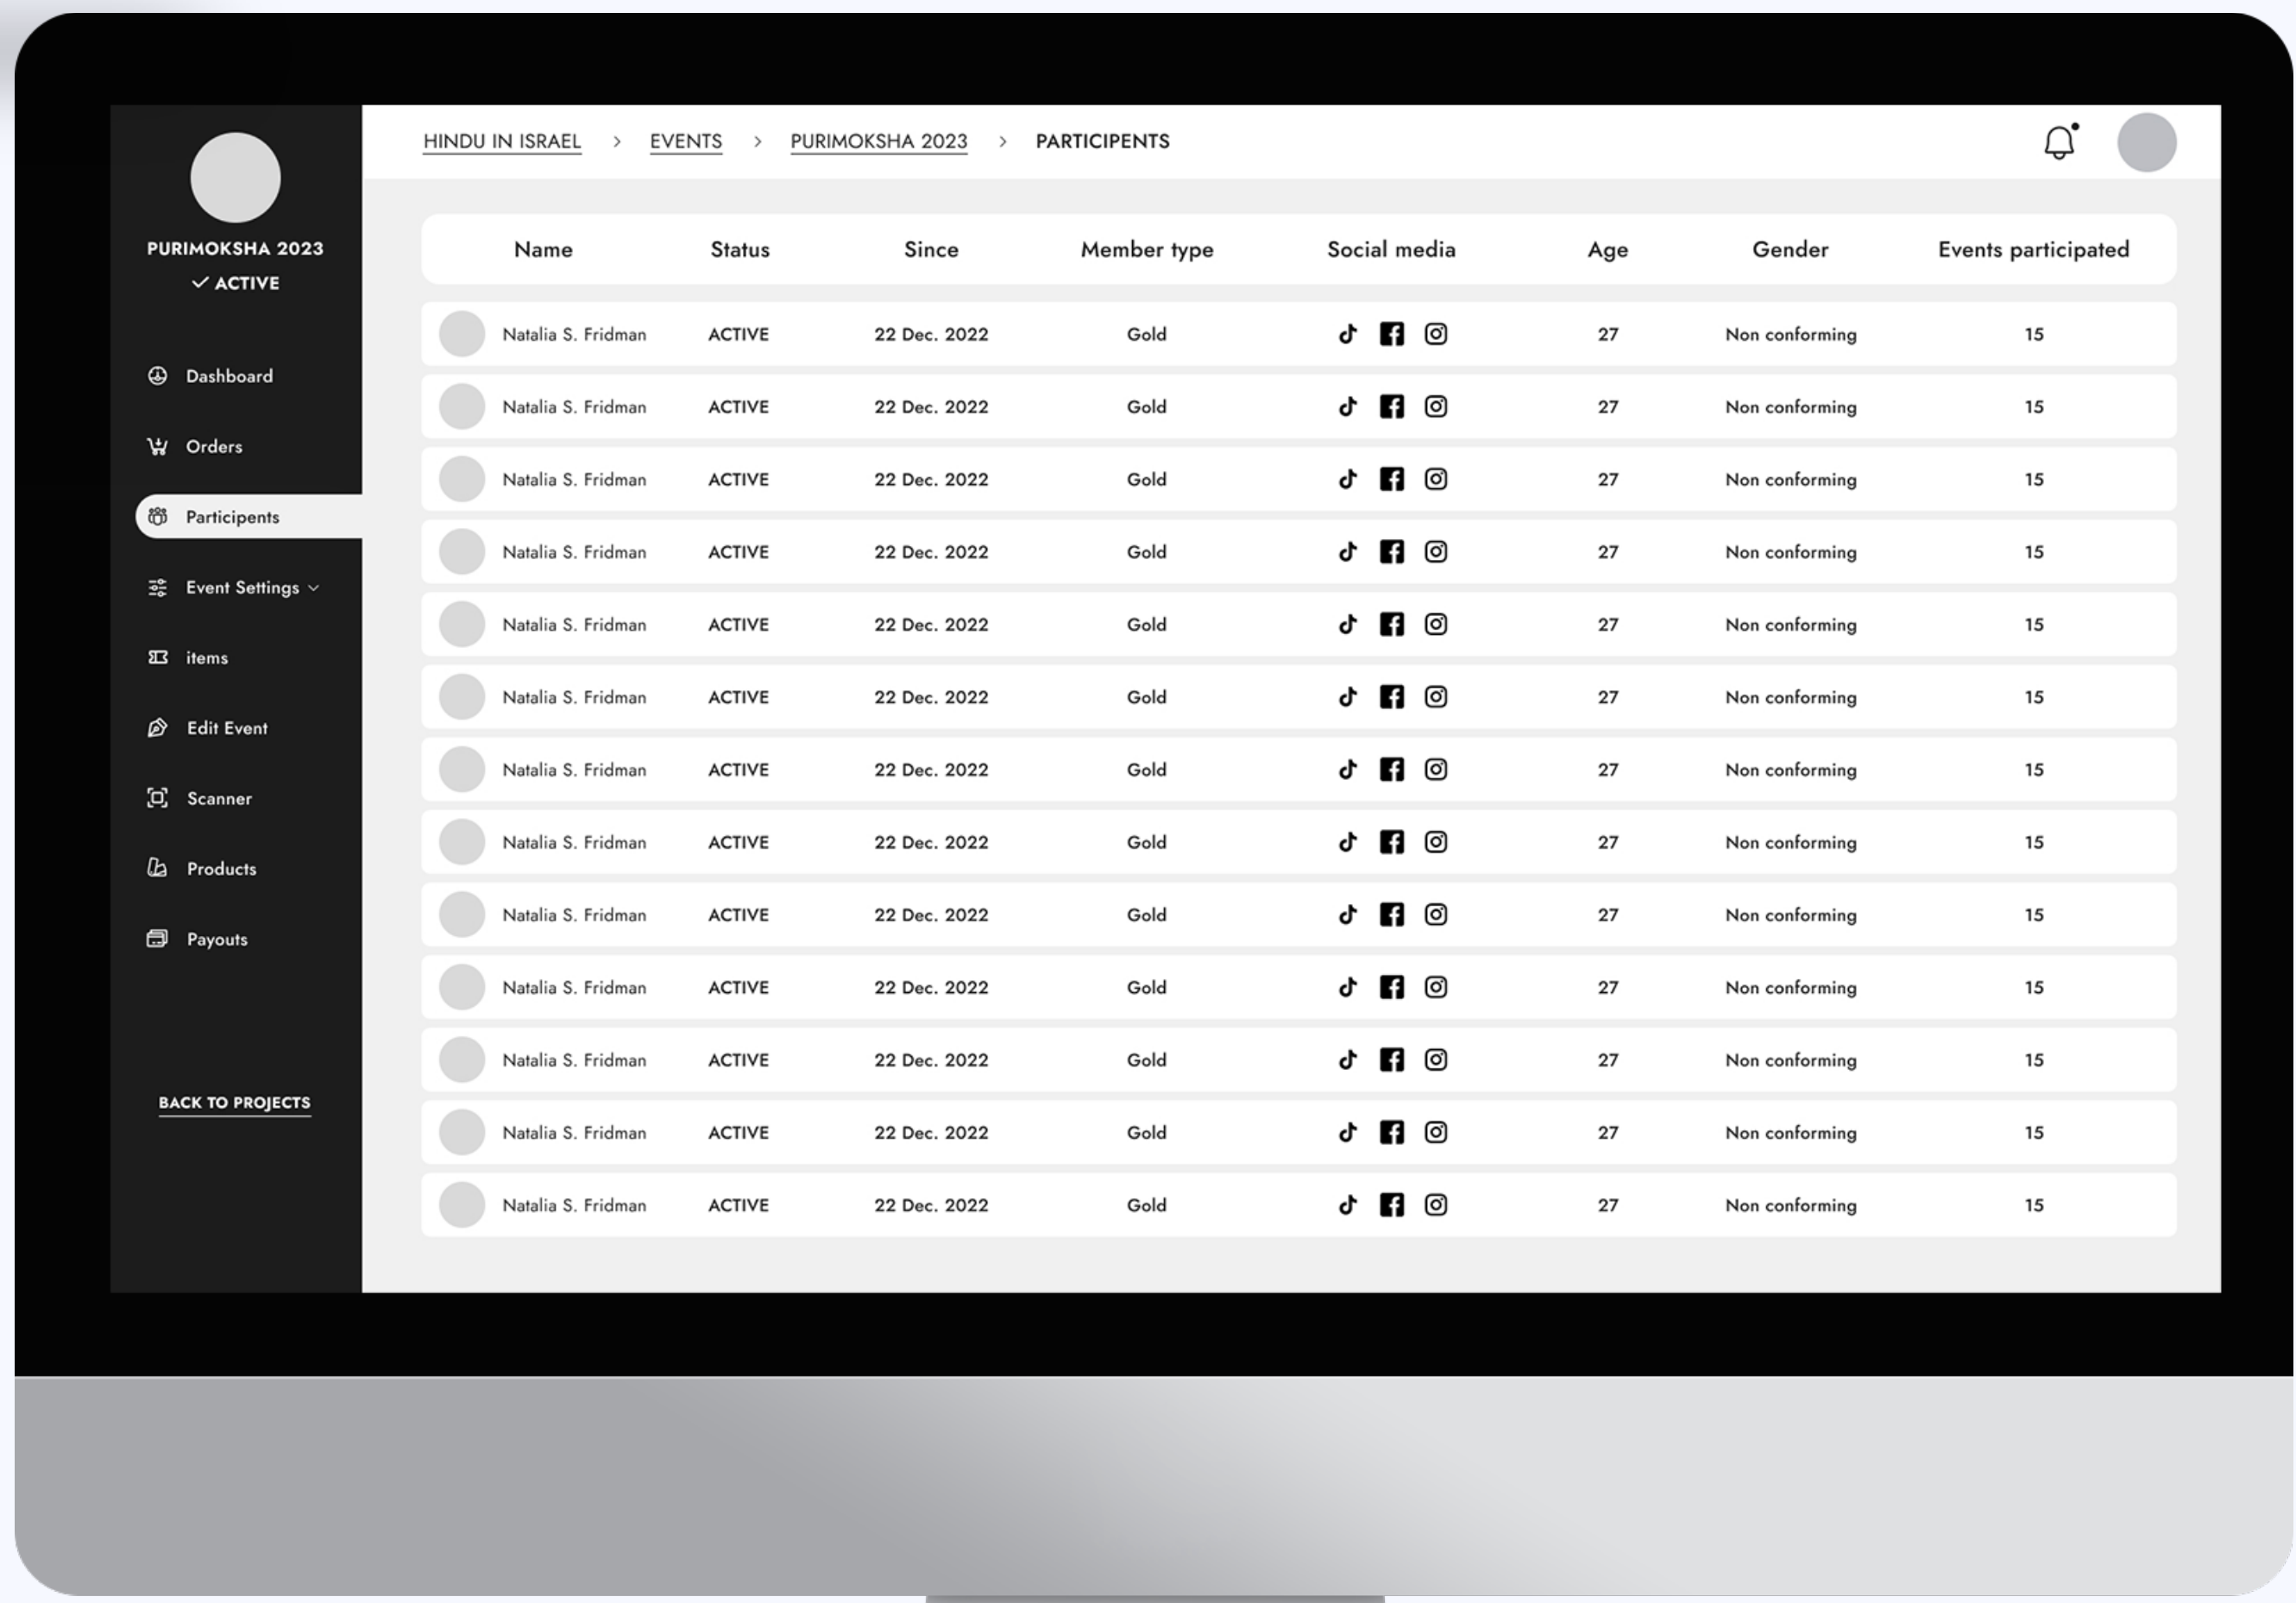

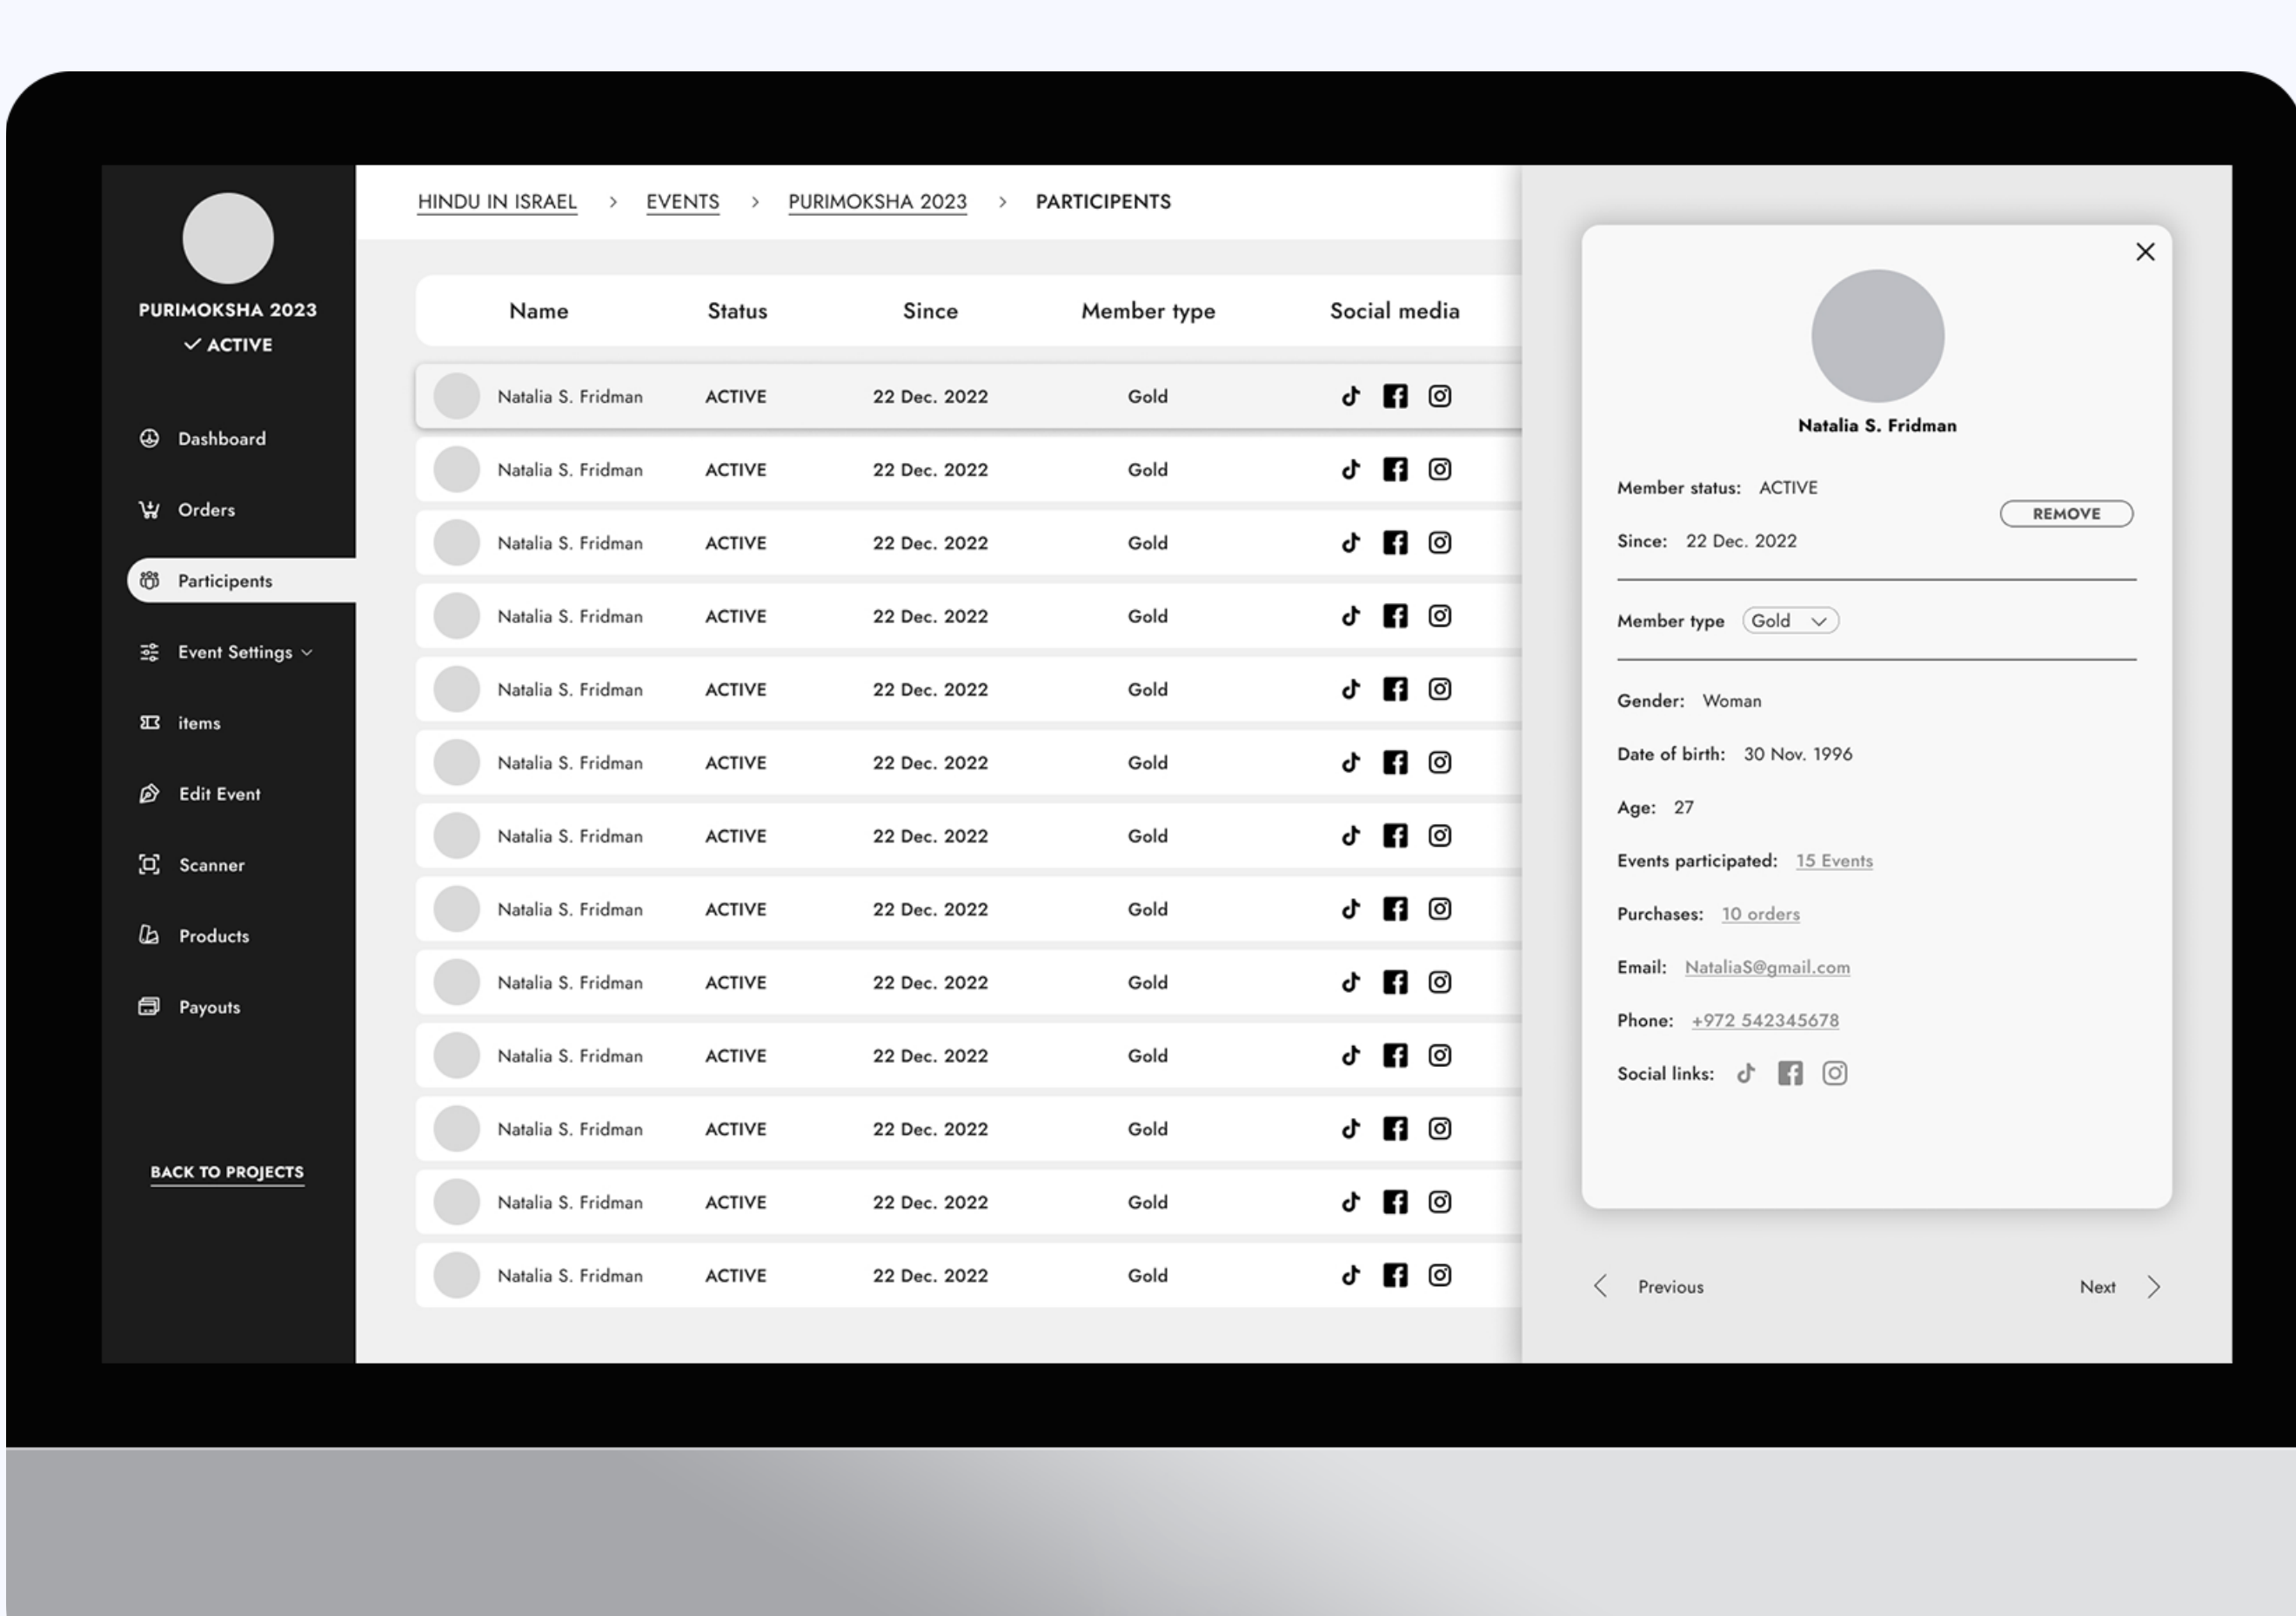

Items Screen

The Items Screen provides comprehensive control over products and merchandise offered within the community and events. The owner can efficiently manage existing items by updating descriptions, prices, and availability. Furthermore, the owner can introduce new items into the inventory, specifying their attributes and attaching relevant visuals. For discontinued or outdated items, the owner can swiftly remove them from the catalog. This screen ensures that the assortment of products remains current and appealing to the community members.

Participant Screen:

The Participant Screen empowers the owner to create an engaged and active community. Owners can access a list of all community members, categorizing them as active, pending, or rejected. They can delve into individual profiles to understand their participation history, including past event attendance and purchase records. The owner can review and approve/reject pending membership requests based on community guidelines. Additionally, the screen allows the owner to modify member types, granting special privileges to active contributors and maintaining a balanced community ecosystem.

The SAAS system offers a comprehensive suite of tools designed to simplify and enhance the management of owner's communities, events, participants, purchases, products, and sales. Through intuitive interfaces and insightful analytics, the owner can make data-driven decisions, foster engagement, and create exceptional experiences for community members while maximizing their revenue potential.
